

Training Tables

1

Verify Nesting Before You Buy

Not all flip-top tables nest together. Confirm the tables you order will nest — most manufacturers show the storage footprint in spec sheets.

2

Plan Electrical Before Furniture

If you want built-in power modules, plan electrical rough-in before finalizing table placement. Power-equipped tables need fixed positions.

3

Use 24" Per Person Minimum

Less than 24" per person feels cramped with a laptop. Use 24" as a hard minimum; 30" per person if budget allows for comfort.

4

Buy Locking Casters

Each caster should lock individually. Test that every caster locks — a table that rolls during class is distracting and potentially unsafe.

5

Order Ganging Clips

Table ganging clips connect adjacent tables to prevent separation. Essential in classroom rows — otherwise tables drift apart during the day.

6

Chevron Over Rows

Chevron layouts improve sight lines and engagement over dead-straight rows with almost no extra cost. Try it once and you'll never go back to straight rows.

7

Size for 80% Capacity

Design your training room for 80% of maximum capacity as the comfortable norm. A room always at 100% creates a poor learning environment.

8

Match Casters to Flooring

Hard-floor casters on carpet get stuck. Carpet casters on hard floors scratch. Always specify your flooring type when ordering flip-top training tables.

9

Add Edge Banding

Specify PVC edge banding on table surfaces (as opposed to paint or tape edges). It lasts far longer under the daily handling training tables receive.

10

Plan for Instructor Space

Reserve at minimum 6' of clear space at the front of the room for the instructor. This area needs power, AV connectivity, and no table obstruction.
